

**Monitoring and Remediation Optimization
System Software 3.0**

**AFCEE MAROS 3.0
New Release**

Mindy Vanderford, Ph.D.
GSI ENVIRONMENTAL INC
Houston and Austin, TX
(713) 522-6300

Monitoring Optimization
Overview: *MAROS 3.0 New Release*

- **Goals and Objectives**
- **Software Structure and New Features**

- **Detailed Descriptions**
- **Wrap Up**

QUESTIONS?

Monitoring Optimization

MAROS – the origin

*How can we get more
meaning from the data
we collect?*

3

Monitoring Optimization

MAROS – the origin

*What makes a good data
collection network?*

4

Monitoring Optimization

MAROS – the origin

- **Good Networks**

- Meets goals
- Not too much, not too little
- Reveal what has happened
- Help ‘prepare for’ what will happen

5

Monitoring Optimization

Method: *Good Networks*

- **What are we looking for?**

- Variability vs. Consistency
- Increasing / Decreasing vs. Stable
- Expected vs. ‘Interesting’
- Moving vs. Stationary
- Where is most of the mass?

RATE
SCALE
VARIABILITY

6

Monitoring Optimization

Goals: *MAROS 1998 -2003*

- Reduce monitoring effort
 - ▶ Demonstrate Plume Stability
 - ▶ Reduce Long-Term O&M Costs
 - ▶ Reduce Number of Wells
 - ▶ Reduce Sampling Frequency

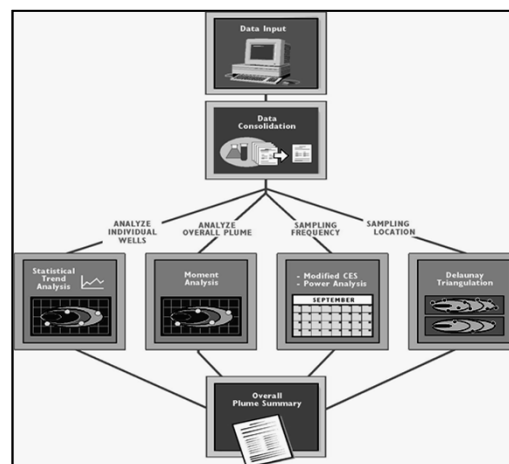

- *Make Recommendations for improving network – for long-term O&M*

Monitoring Optimization

MAROS – 2.X

- Concentration Trends
- Total mass and distribution
- Spatial uncertainty
- Sampling frequency

Monitoring Optimization
Goals: MAROS 2009-2012

- Improve analysis of existing data
 - ▶ Demonstrate Remedial Performance
 - ▶ ‘Best Choice’ wells and frequency
 - ▶ Support Cessation of Active Remedies
 - ▶ Support Exit Strategies

- *Make Recommendations for improving network – to attain closure*

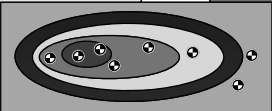

9

Monitoring Optimization
MAROS 2.2 → MAROS 3.0

- Limited Individual Well Statistics
- Limited spatial analysis options
- Limited User choice and interactivity
- Usability issues
- Limited data export options

➔

- *Expanded Individual Well Statistics*
- *Improved spatial analysis*
- *More User choice and comparison options for spatial analysis*
- *Improve Usability*
- *More export opportunities and options*

10

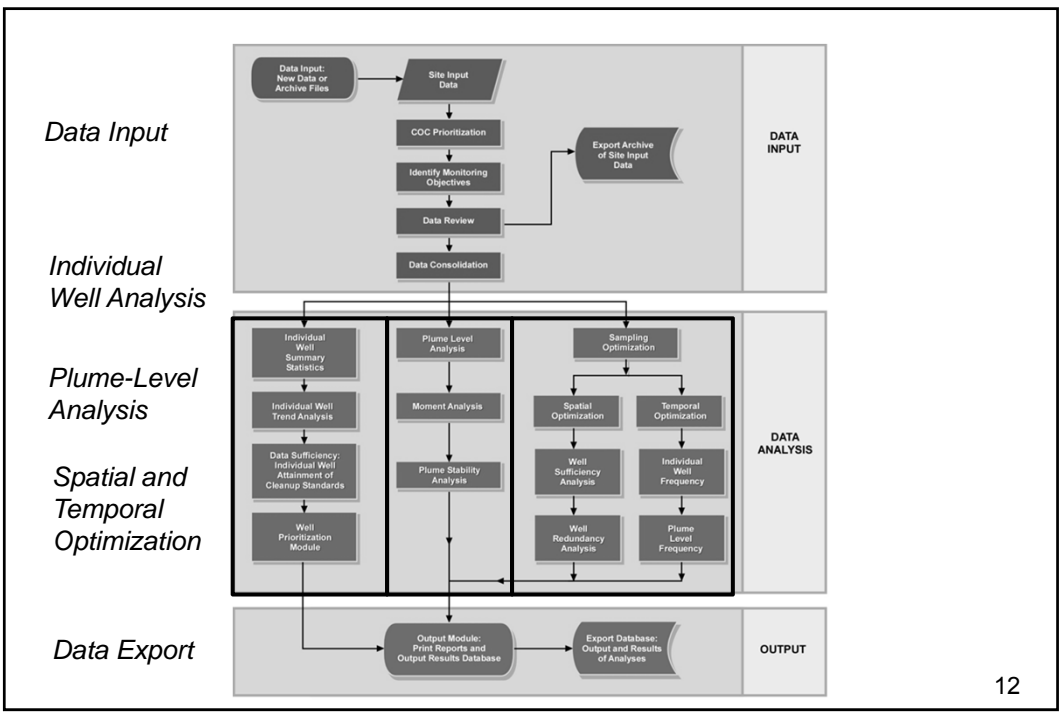

Monitoring Optimization
Overview: MAROS 3.0 New Release

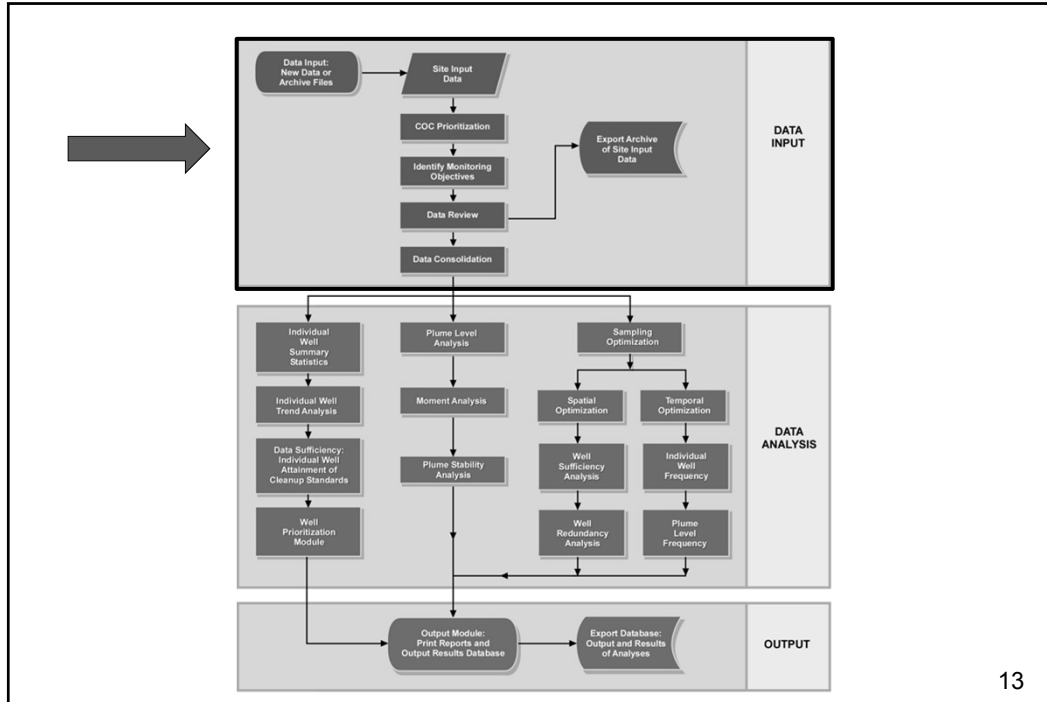

- Goals and Objectives
- ➔ ■ Software Structure and New Features

QUESTIONS

- Detailed Description
- Conclusions

11

13

Column Number	Field Name	Data Type	Description
<i>Initial Input Data</i>			
1	WellName	Text	Name of the groundwater well sampled, all well names should be spelled consistently. <i>(Required)</i>
2	XCoord	Number (Double) in Feet	X coordinate or Easting coordinate of the well, although not mandatory for statistical analysis, it is required for spatial analysis purposes. <i>(Required)</i>
3	YCoord	Number (Double) in Feet	Y coordinate or Easting coordinate of the well, although not mandatory for statistical analysis, it is required for spatial analysis purposes. <i>(Required)</i>
4	Constituent	Text	Constituent of Concern – the User has the option of using the MAROS Constituent Name <i>or</i> the ERPIMS Code for constituent names. <i>(Required)</i>
4	CODE	Text	Constituent of Concern – ERPIMS codes and MAROS Constituent names can be found in the <u>MAROS_ConstituentName_List.xlsx</u> . <i>(Required)</i>
5	SampleDate	Short Date	Date Sample was collected. format mm/dd/yyyy. <i>(Required)</i> NOTE: No Hours: Minute Time Codes.
6	Result	Number (Double)	Analytical result: enter result as a number, if value is below detection limit (non-detect) then leave the cell blank (null value). <i>(Required)</i>
7	Units	Text	Measurement units for result: choices mg/L; ug/L; dg/L; g/L; dg/L. (no Greek symbols) <i>(Required)</i>
8	DetLim	Number (Double)	Reporting Limit (detection limit) – units must be the same as the Result field. <i>(Required)</i>
9	Flags	Text	Flag "ND" for non-detect (must enter the detection limit in the DetLim field), or "TR" for trace amount (must enter both detection limit and the result). If result is not qualified, the cell should be blank. No other flags should be included in this field. <i>(Required)</i>

14

Monitoring Optimization Software: *Data Input*

- Site Details- Data checker **NEW!**

▶ **MAROS 2.2**

- Monitoring Objectives- **NEW!**

▶ **Primary – Source, Tail, Delineation**

▶ **Secondary - Sources, Remedy, Delineation**

- Priority COCs

▶ **Cleanup Goals**

▶ **Priority by Well – NEW!**

Secondary Monitoring Objectives

MAIN MENU > SITE DETAILS > SECONDARY MONITORING OBJECTIVES

Each well in the network should perform a function supporting site decision making. For each well, identify the monitoring objectives associated with data obtained from the well.

Well Name	Sec. Source	Boundary PDE	Remedy	Exit	Permit	Cross-Gradient Delineation	Downgradient Delineation	Upgradient	Extraction	Unique	Early Detection
FWW-X Well Score: 3	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
FWW-W Well Score: 3	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
FWW-U Well Score: 3	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

MAROS COC Assessment

Project: MAROS Tutorial User Name: John Smith
 Location: Bubba's State: Texas

Toxicity:

Contaminant of Concern	Representative Concentration (mg/L)	PRG (mg/L)	Percent Above PRG
BENZENE	4.2E-01	5.0E-03	8385.0%
PERCHLORATE	1.1E-01	1.7E-02	535.3%
BARLIUM	3.2E+00	2.0E+00	58.5%
TOLUENE	1.3E+00	1.0E+00	29.5%
COPPER	1.6E+00	1.3E+00	22.8%

Note: Top COCs by toxicity were determined by examining a representative concentration for each compound over the entire site. The compound representative concentrations are then compared with the chosen PRG for that compound, with the percentage exceedance from the PRG determining the compound's toxicity. All compounds above exceed the PRG.

Prevalence:

Contaminant of Concern	Class	Total Wells	Total Exceedance	Percent Exceedances	Total Detects
BENZENE	ORG	14	10	71.4%	13
BARLIUM	MET	14	8	57.1%	14
PERCHLORATE	INO	14	7	50.0%	12
TOLUENE	ORG	14	5	35.7%	14
COPPER	MET	14	5	35.7%	14

Note: Top COCs by prevalence were determined by examining a representative concentration for each well location at the site. The total exceedances (values above the chosen PRG) are compared to the total number of wells to determine the prevalence of the compound.

Mobility:

Contaminant of Concern	Kd/Koc
PERCHLORATE	
BENZENE	0.0984
TOLUENE	0.347
BARLIUM	11
COPPER	40

Note: Top COCs by mobility were determined by examining each detected compound in the dataset and comparing their mobilities (Koc's for organics, assuming f_{oc} = 0.001, and K_d's for metals).

Priority Constituents by Well

MAIN MENU > SITE DETAILS > PRIORITY CONSTITUENTS BY WELL

Priority constituents are determined for each well by dividing either the average or the maximum concentration

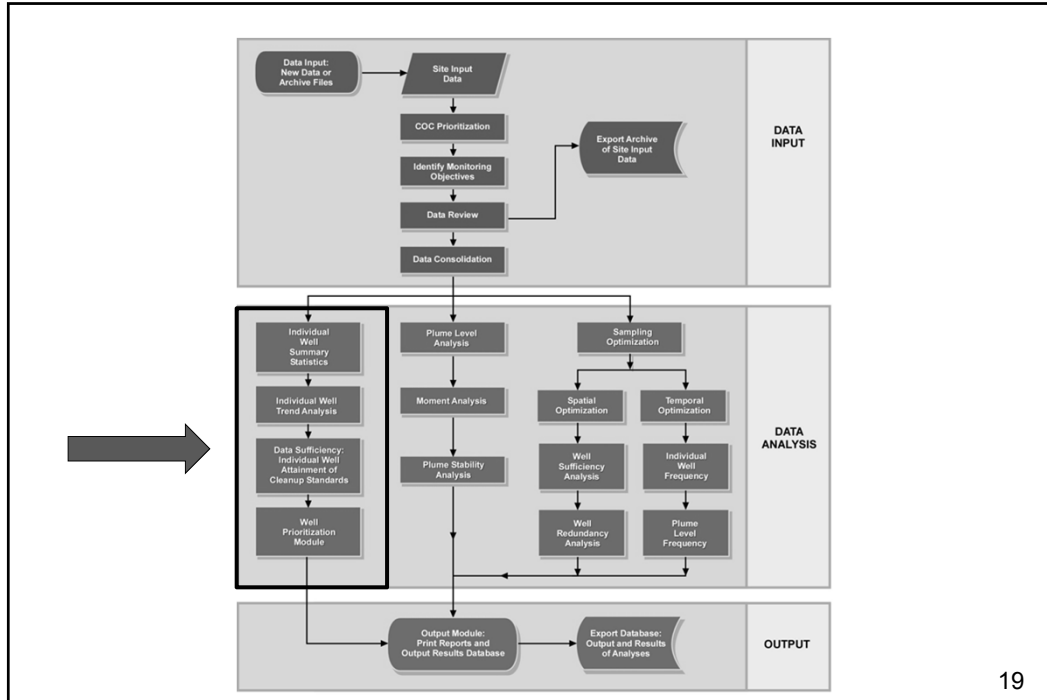

Well Name	Priority COC Based on Average Concentration	Priority COC Based on Maximum Concentration
MW-1	BENZENE	BENZENE
MW-11	BENZENE	BENZENE
MW-12	BENZENE	BENZENE
MW-13	BENZENE	BENZENE
MW-14	BENZENE	BENZENE
MW-15	COPPER	TOLUENE
MW-16	BENZENE	BENZENE
MW-2	BENZENE	BENZENE
MW-3	BENZENE	BENZENE
MW-4	BENZENE	BENZENE
MW-5	BENZENE	BENZENE
MW-6	TOLUENE	BARLIUM
MW-7	BARLIUM	BARLIUM
MW-8	TOLUENE	TOLUENE

Software: *Spatial Optimization*

■ Spatial Optimization – Uncertainty

▶ *Slope Factor*

▶ *Uncertainty between points normalized by maximum of estimated or known result*

▶ *Relative Error*

▶ *Uncertainty between points normalized by maximum of known result*

▶ *Coefficient of Variation*

▶ *Variability in uncertainty between points over time*

Monitoring Optimization

Software: *Spatial Optimization*

■ Slope Factor and Relative Error

$$SF_i = \left| \frac{EC_i - NC_i}{Max(EC_i, NC_i)} \right|$$

Estimated concentration of node:

$$EC_i = \left[\sum_{j=1}^M NC_j \cdot \frac{1}{d_{ij}} \right] / \left[\sum_{j=1}^M \frac{1}{d_{ij}} \right]$$

where, M = number of triangles surrounding the node

SF → 1, well is important; SF → 0, well is not important

Monitoring Optimization

Software: *Spatial Optimization*

■ Slope Factor and Relative Error

$$SF_i = \left| \frac{EC_i - NC_i}{Max(EC_i, NC_i)} \right|$$

$$RE_i = \left| \frac{EC_i - NC_i}{NC_i} \right|$$

- Varies over orders of magnitude
- RE → 10000, well is important; RE → 0, well is not important
- COV – standard deviation/mean for all sample events

Slope Factor and Relative Error Results

MAIN MENU > SAMPLING OPTIMIZATION MENU > WELL SUFFICIENCY MENU > SLOPE FACTOR AND RELATIVE ERROR RESULTS

The table below summarizes the Slope Factor, Relative Error, and COV for each well/COC combination. High values indicate high uncertainty.

Well Areas (Voronoi Areas)

Air Force Center for Engineering and the Environment
MAROS Version 3.0
Release 352, September 2012

MAIN MENU > SAMPLING OPTIMIZATION MENU > WELL SUFFICIENCY MENU > WELL AREAS (VORONOI AREAS)

The table below summarizes the area of influence (Voronoi Area) and the percent of the total plume area each well represents. The User can enter a cutoff value to identify areas in the network that may not have sufficient well coverage.

Well Name	Well Area	% of Plume Area	Well Location	
MW-S	19,199.87	20.27	Interior	
MW-H	18,687.30	19.73	Boundary	
MW-B	15,506.39	16.37	Interior	
MW-X	13,329.11	14.07	Boundary	
MW-C	9,349.32	9.87	Interior	
MW-T	7,634.34	8.06	Interior	
MW-W	5,807.99	6.13	Boundary	
MW-Z	2,786.52	2.94	Boundary	
MW-D	1,850.76	1.95	Boundary	
MW-U	587.28	0.62	Boundary	

Average: 9,473.89

Median: 8,491.83

Total Network Footprint: 94,738.89

Cutoff Median / Mean Ratio:

Median / Mean Ratio: 0.896

Conclusion:
No new wells may be necessary.

Network Frequency Summary & Input

MAIN MENU > SAMPLING OPTIMIZATION MENU > SAMPLING FREQUENCY MENU > IN

Summary of values from individual well frequency module including the average recent determination and the coefficient of variation for the total mass.

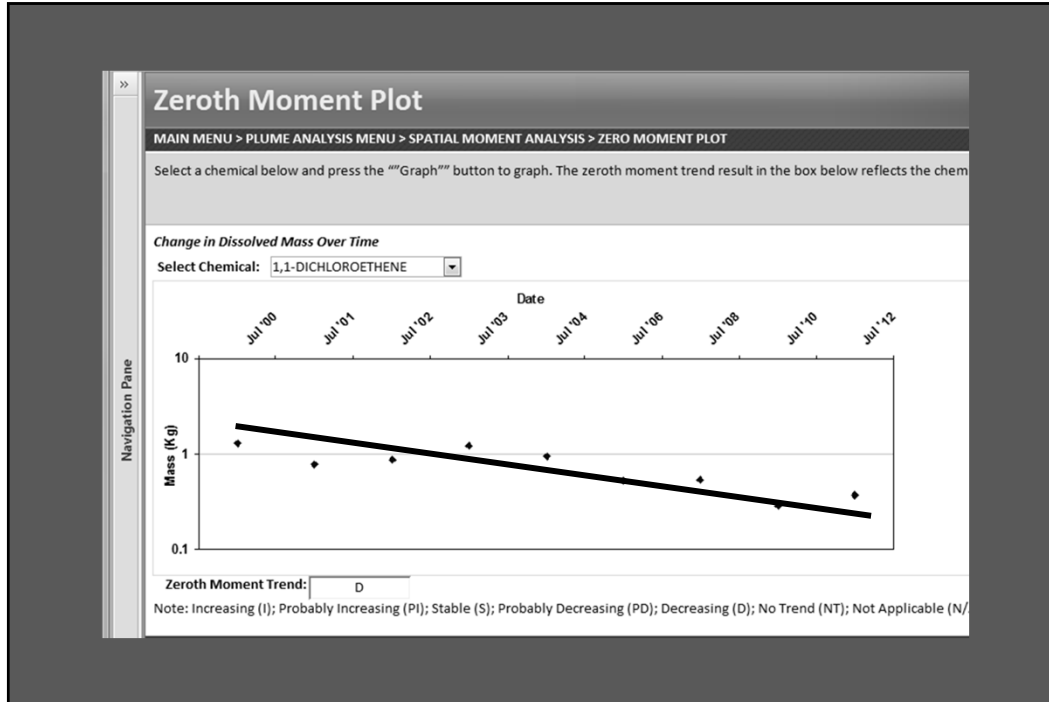

Input Parameters:

Average Recent Frequency: 1.3
 Average Transport Frequency: 3.9
 Reporting Frequency: 5

Options:

Cutoff values for regression on total plume mass.

R-squared:
 Coefficient of Variation:

Network Frequency

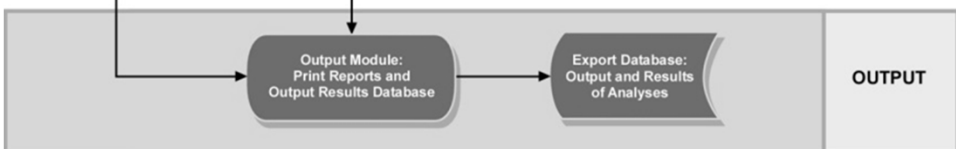

MAIN MENU > SAMPLING OPTIMIZATION MENU > SAMPLING FREQUENCY MENU > INDIVIDUAL WELL FREQUENCY > NETWORK FREQUENCY > NETWORK FREQUENCY

The plume-wide frequency is based on the linear regression of Total Mass estimates over the time frame. The decision logic is based on the slope, R2 and COV of the linear F

Compound	Lin. Regr. (Plume Mass)		Variability of Mass Change Coefficient of Variation	Typical Monitoring Frequency in Timeframe	Recommended Frequency
	Slope	R-squared			
1,1,1-TRICHLOROETHANE	-0.000929	0.857	0.85	Semi-Annual	Biennial
1,1-DICHLOROETHENE	-0.000301	0.321	0.63	Semi-Annual	Semi-Annual
TETRACHLOROETHYLENE(PCE)	-0.000539	0.425	0.92	Semi-Annual	Semi-Annual
TRICHLOROETHYLENE (TCE)	0.000289	0.141	0.76	Semi-Annual	Semi-Annual
VINYL CHLORIDE	-0.000026	0.003	0.48	Semi-Annual	Semi-Annual

Slope	COV	R2	Result
All	< User cutoff	< User Cutoff	Keep current sample frequency (Average current)
< 0 (negative)	< User cutoff	>= User Cutoff	2 steps less frequent
All	>=User cutoff	< User Cutoff	1 step more frequent
< 0 (negative)	>=User cutoff	>=User cutoff	1 step less frequent
Mass = 0	Do not calculate		Minimum of the reporting frequency or the transport-based frequency
